Valtra A Series

Engineered to be Strong

The Valtra A Series has been engineered to be extremely strong and reliable. The tractor features Valtra's unique chassis construction, in which the fuel tank acts as a midframe and at the same time helps protect the drive to the front axle. The design offers high ground clearance with good protection for the underframe.

This is a strong, lightweight and extremely agile tractor that delivers the performance you need to carry out your tasks as efficiently as possible. The powertrain of the Valtra A Series is the most efficient in its class. The Valtra A Series features its own range of durable and easy-to-maintain Tier 3 compatible SisuDiesel engines. The entire range of A Series tractors is also available in two wheel drive.

••••• ADVANTAGES FOR YOU •••••

- Small turning radius, agile
- Long wheelbase increases stability
 - Strong construction
- Good front-loader tractor
 - High ground clearance
 - Flat bottom
